Education

Hochschule Aalen, Germany <i>Master's in Machine Learning and Data Analytics</i>	2025 – Present
Panjab University, India <i>Bachelor's in Information Technology</i>	2020 – 2024

Work Experience

Software Engineer (Intern) <i>ChicMic LLP, Chandigarh, India</i>	March 2024 – Nov 2024
- Built Python data pipelines using Pandas, NumPy, and SQL for automated data cleaning and transformation, improving processing efficiency by 20%. - Optimized complex SQL queries for data extraction and analysis, reducing query runtime by 30%. - Developed machine learning models using Scikit-learn for predictive analysis, improving accuracy by 15%. - Implemented automated ETL pipelines to improve dataset quality for analytics and modeling.	

Projects

Loan Approval Intelligent System - Developed a Loan Approval Prediction system using Python, Pandas, NumPy, and Scikit-learn, performing data cleaning, EDA, feature engineering, and preprocessing with Pipeline and ColumnTransformer. - Trained and evaluated Logistic Regression, Decision Tree, and Random Forest models using Accuracy, Precision, Recall, F1-score, ROC-AUC, and Confusion Matrix.
Personal Data Detection in Image and Video - Collaborated in a 3-member team comprising 1 faculty supervisor and 2 students to develop an end-to-end Python pipeline for detecting and captioning personal and sensitive information in images and videos using Tesseract OCR, YOLO, and Presidio. - Contributed to integrating BLIP-based image captioning and sensitive-data classification to identify categories such as identity and financial information, with structured outputs for downstream processing.
AI-Video-Meeting-Analyser - Architected an end-to-end Audio-RAG Pipeline using LangChain, Mistral AI, and ChromaDB, engineering an automated preprocessing pipeline that extracts audio tracks from video files/YouTube links, transcribes speech (Whisper and Sarvam AI), and indexes vector embeddings (HuggingFace) for low-latency contextual QnA. - Engineered automated NLP extraction workflows utilizing custom prompt templates and Map-Reduce summarization to parse unstructured meeting transcripts into structured action items, key decisions, and open questions.

Technical Skills

Programming: Python, SQL, Java
Data Analysis: Pandas, NumPy, Data Wrangling, Exploratory Data Analysis (EDA), Statistical Inference
Machine Learning: Scikit-learn, PyTorch, TensorFlow, Feature Engineering, Model Evaluation
Data Engineering: SQL, PySpark, Data Pipelines
Visualization: Power BI, Matplotlib, KPI Dashboards, Seaborn
Tools: Git, VS Code, Jupyter, Streamlit, Docker, Google Cloud(GCP), Postman
Languages: English(Fluent), Hindi(Native), German(B1 Completed), German(B2 Learning)

Certificate

Neural Networks and Deep Learning — Coursera	August 2026
- Built and trained neural networks using Python and Keras. - Learned backpropagation, optimization, and deep learning fundamentals.
